Use Cloud CLI Tools Install the CLI for your cloud provider (e.g., AWS CLI). Use it to list resources, upload files to storage, and manage VMs.

Name: Joan Festina J

Department:ECE

Introduction and Overview

Cloud CLI tools, such as AWS CLI, allow users to interact with cloud services directly from the terminal, enabling automation and efficient resource management. This task involves installing the AWS CLI, configuring it with AWS credentials, and using it to perform basic operations like listing resources, uploading files to S3, and managing EC2 instances. CLI tools offer a faster and scriptable alternative to the AWS Management Console, improving productivity. By completing this task, you'll gain hands-on experience in cloud automation and resource control using command-line commands.

Objective

The goal of this project is to:

1. Learn Cloud CLI Basics – Install and configure AWS CLI to interact with cloud resources using command-line commands.
2. Manage Cloud Resources – Use AWS CLI to list cloud resources, upload files to S3, and manage EC2 instances efficiently.
3. Enhance Automation Skills – Gain hands-on experience in automating cloud tasks, improving efficiency over manual AWS Management Console operations.

Importance of Cloud CLI

Hands-on Learning & Efficiency – Cloud CLI provides direct interaction with cloud services, enabling faster and more efficient management compared to the web console.

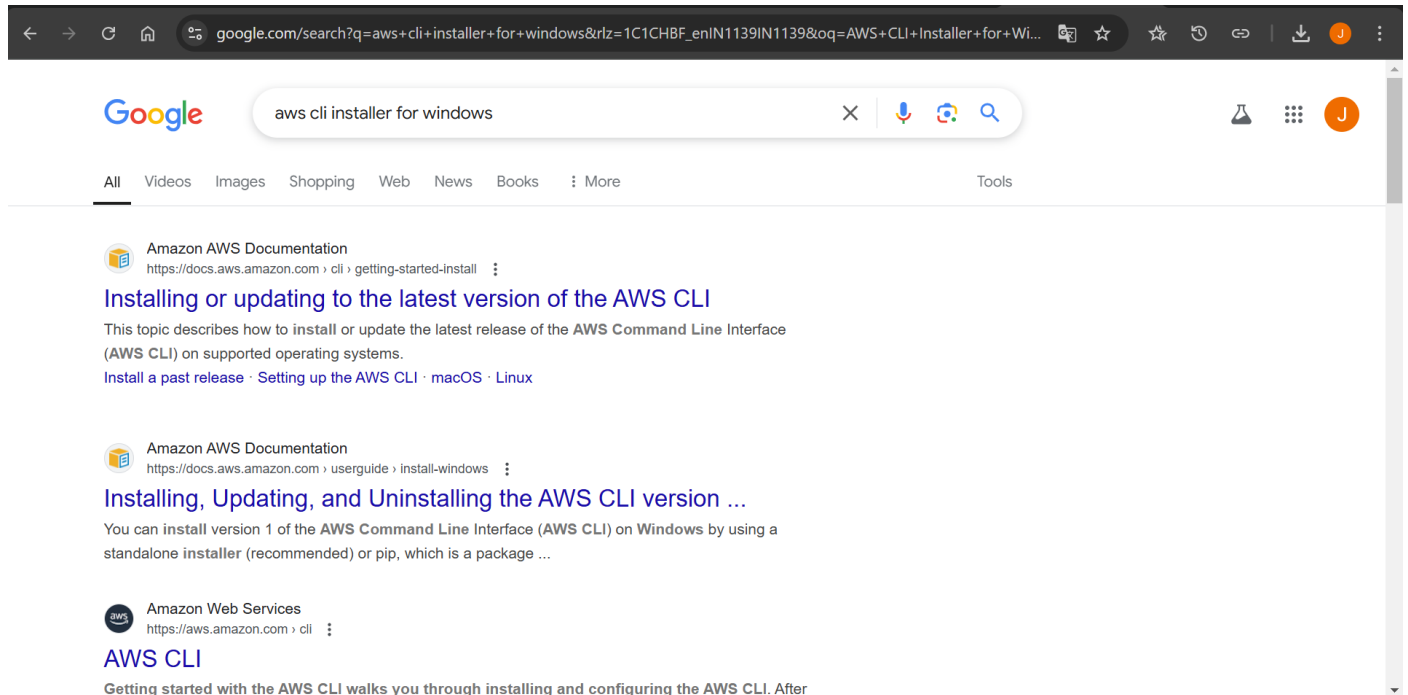

Automation & Scripting – It allows users to automate repetitive tasks, such as resource provisioning and deployments, improving productivity.

Remote Cloud Management – With CLI tools, users can manage cloud resources from any terminal, making it ideal for DevOps, remote administration, and large-scale cloud operations.

Step-by-Step Overview

Step 1:

Search for "AWS CLI Installer for Windows" on Google and click the first link to access the official website.

Step 2:

Click on the "Install/Update" option located on the left-hand side of the Apache Lounge website. Select the link regarding your OS, Install by using the link provided else use the *msiexec* command

The screenshot shows the AWS Command Line Interface (CLI) documentation page for Windows. The page title is "Install or update the AWS CLI". It provides instructions on how to download and install the AWS CLI MSI installer for Windows (64-bit). The instructions include a link to the AWS CLI version 2 Changelog on GitHub and a command to run the MSI installer using `msiexec.exe`. A code block shows the command: `C:\> msiexec.exe /i https://awscli.amazonaws.com/AWSCLIV2.msi`. Below the code block, it mentions that for various parameters that can be used with `msiexec`, see `msiexec` on the Microsoft Docs website. For example, you can use the `/qn` flag for a silent installation. Another code block shows the same command with the `/qn` flag: `C:\> msiexec.exe /i https://awscli.amazonaws.com/AWSCLIV2.msi /qn`. On the right side of the page, there is a section titled "On this page" with links to "AWS CLI install and update instructions", "Troubleshooting AWS CLI install and uninstall errors", and "Next steps". There is also a section titled "Recently added to this guide" and a "Did this page help you?" section with "Yes" and "No" buttons, and a "Provide feedback" link. A Windows File Explorer overlay is visible on the right side of the page, showing the "Recent download history" with a list of files:

- AWSCLIV2.msi (40.7 MB • Done)
- POC-3.pdf (2.6 MB • 13 minutes ago)
- PDFfiller - POC_12 jo.pdf (415 KB • 36 minutes ago)
- POC-2.pdf (316 KB • 59 minutes ago)
- POC-1.pdf (298 KB • 1 hour ago)
- POC-6.pdf (298 KB • 1 hour ago)
- POC-5 (1).docx (262 KB • 2 hours ago)
- One Page Student Template_Second Year (5).pdf (222 KB • 6 hours ago)

Step 3:

Once installed, verify the installation by opening Command Prompt (cmd) or PowerShell and running **aws --version**

```
PS C:\Users\Admin> aws --version
aws-cli/2.23.11 Python/3.12.6 Windows/11 exe/AMD64
PS C:\Users\Admin> |
```

It should return something like

aws-cli/2.x.x Python/3.x.x Windows/x86_64

Step 4:

Before using AWS CLI, you need to configure it with your AWS credentials.

Open Command Prompt and type **aws configure**

It will ask for:

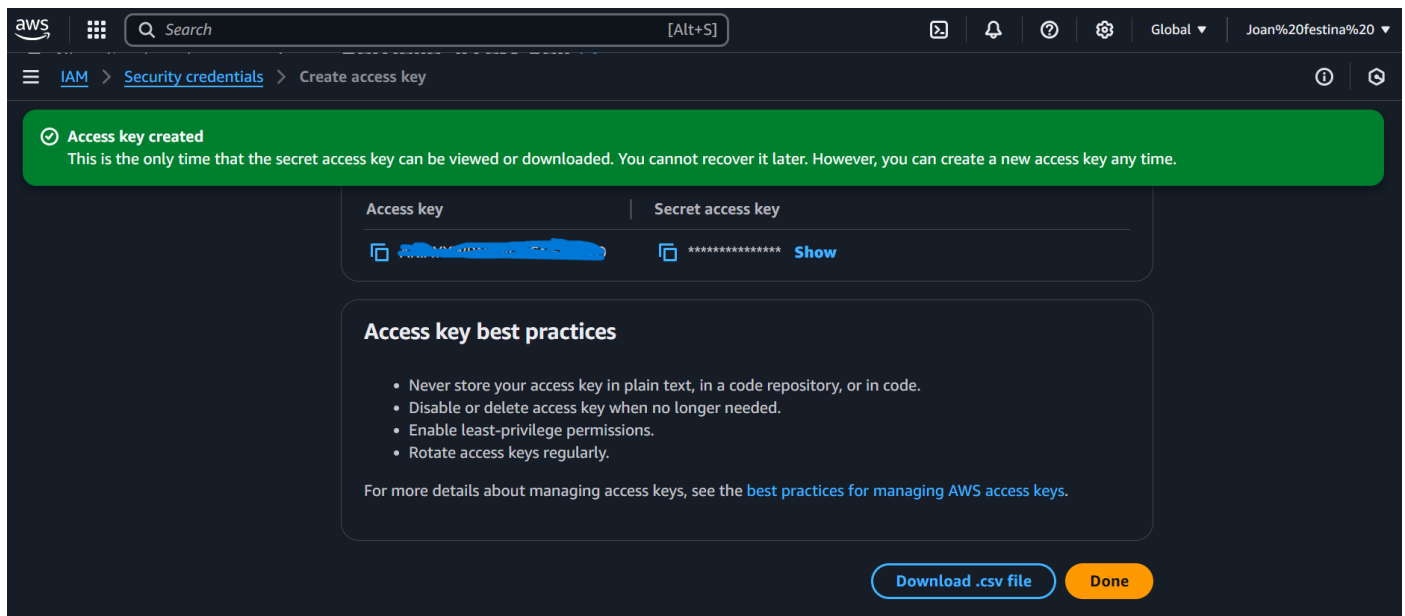

AWS Access Key ID → Get it from AWS IAM > Security Credentials

AWS Secret Access Key → Get it from AWS IAM > Security Credentials

Default region name → Example: us-east-1 (Find yours in AWS Console)

Default output format → Keep it as json or press Enter for default

```
PS C:\Users\Admin> aws --version
aws-cli/2.23.11 Python/3.12.6 Windows/11 exe/AMD64
PS C:\Users\Admin> aws configure
AWS Access Key ID [None]: |
```

Step 5:

To see all storage buckets, Type **aws s3 ls** in cmd

To check running EC2 instances **aws ec2 describe-instances** in cmd

```
PS C:\WINDOWS\system32> aws configure
AWS Access Key ID [*****JXAP]: AKIAYXWBNXNU6CVI6WHJ
AWS Secret Access Key [*****xN9v]: 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
Default region name [https://us-east-1.console.aws.amazon.com/s3/get-started?region=us-east-1]: us-east-1
Default output format [json]: json
PS C:\WINDOWS\system32> aws s3 ls
PS C:\WINDOWS\system32> aws s3 ls
PS C:\WINDOWS\system32> aws s3 ls
2025-02-03 21:36:01 mycloud2k25
PS C:\WINDOWS\system32> _
```

```
PS C:\WINDOWS\system32> aws ec2 describe-instances
{
  "Reservations": []
}
```

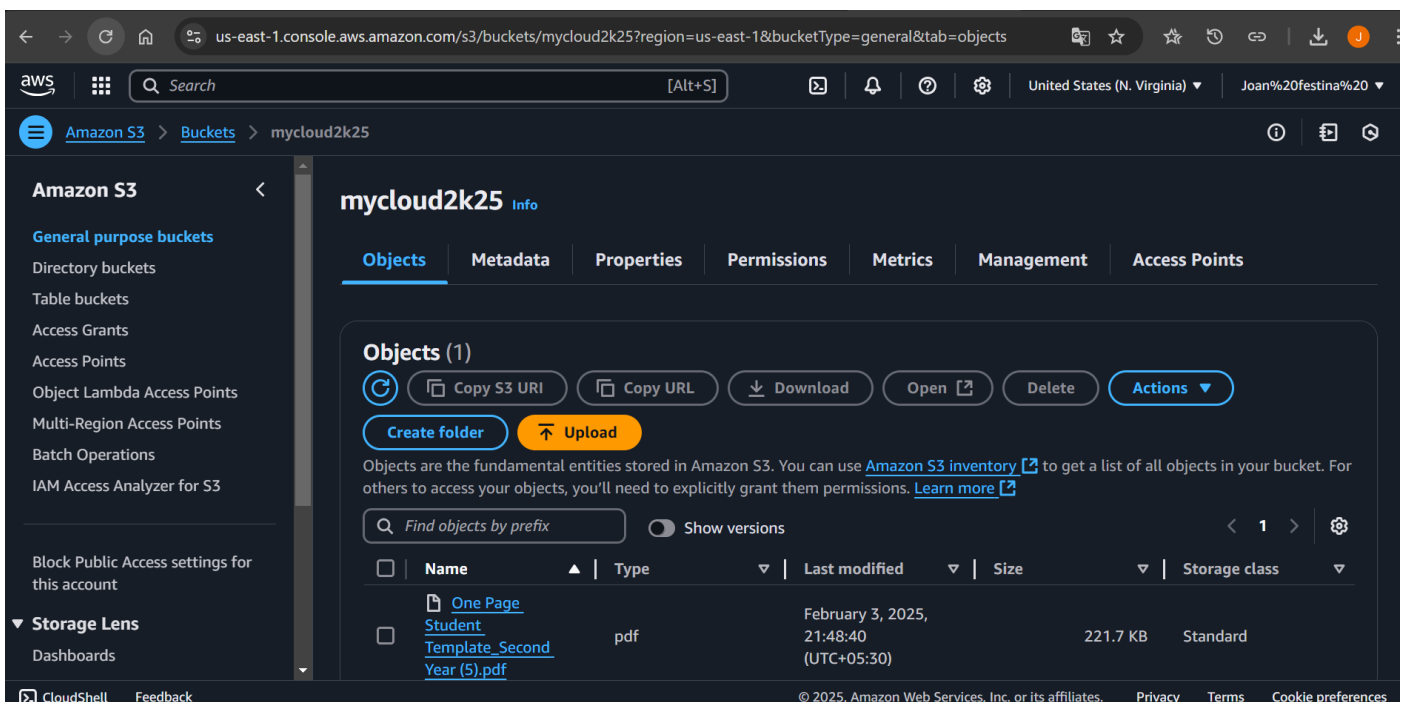

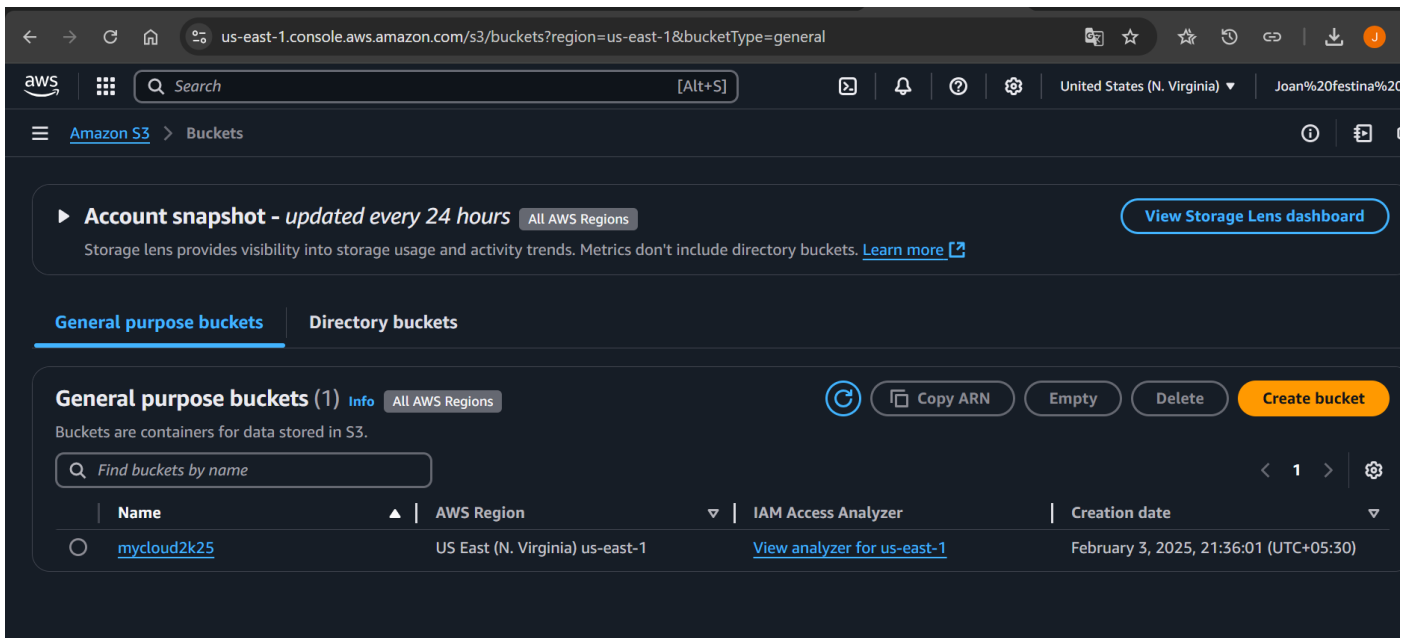

Step 6:

Create an S3 Bucket by typing **aws s3 mb s3://your-unique-bucket-name** in cmd

```
PS C:\WINDOWS\system32> aws s3 mb s3://muccloud2k25
make_bucket: muccloud2k25
PS C:\WINDOWS\system32>
```

Upload a file to S3 Bucket by typing **aws s3 cp yourfile.txt s3://your-unique-bucket-name/** in cmd

```
PS C:\WINDOWS\system32> aws s3 cp "C:\Users\Admin\Downloads\One Page Student Template_Second Year (5).pdf" s3://mycloud2k25
upload: ..\..\Users\Admin\Downloads\One Page Student Template_Second Year (5).pdf to s3://mycloud2k25/One Page Student Template_Second Year (5).pdf
PS C:\WINDOWS\system32> _
```

Step 7:

To Start an EC2 Instance, Type **aws ec2 start-instances --instance-ids <INSTANCE_ID>** in cmd

Replace <INSTANCE_ID> with your actual instance ID

```

"StartingInstances": [
  {
    "InstanceId": "i-0a3c2170890ffb3e1",
    "CurrentState": {
      "Code": 0,
      "Name": "pending"
    },
    "PreviousState": {
      "Code": 80,
      "Name": "stopped"
    }
  }
]
}

```

	Name	Instance ID	Instance state	Instance type	Status check	Alarm status	Availability Zone	Public IPv4
<input type="checkbox"/>	task14	i-03b6d28a8978f04bc	Terminated	t2.micro	-	View alarms +	ap-south-1b	-
<input checked="" type="checkbox"/>	instance1	i-0a3c2170890ffb3e1	Running	t2.micro	Initializing	View alarms +	ap-south-1b	ec2-15-206
